

Pup Deck Instructions

Installation

1. Remove any old material (if applicable) from the upper part of your board and clean the area where the Pup Deck will be placed. Make sure the surface is free of dirt and oil. Dish soap and water or a solvent such as acetone or alcohol works well. Be sure to work in a well-ventilated area.

2. Prior to removing the paper backing, position your Pup Deck pieces on your board. You can move them around until you find just the right spot. Doing this before sticking will help insure proper location and fit. Trace along the outside edge of the Pup Deck in pencil to give yourself a guide for installing once you are ready.

3. You are now ready to glue down your new Pup Deck. Double check to make sure the area is dry and free of dirt, oil or old glue. Work with one piece at a time. Peel off the paper backing and gently position the Pup Deck pieces in place, one by one. Do not apply pressure yet so the pieces can be repositioned a little easier if necessary.

4. Once the Pup Deck is correctly positioned, apply firm pressure. Work from the center to the outer edges of each piece. This is a pressure sensitive adhesive, so put as much weight into as you can. Use a small rolling pin or similar round object to go over the surface of the Pup Deck pieces, paying attention to the edges of each piece to ensure a good bond.

5. After 24 hours the Pup Deck is 85% cured and can be used. The self-adhesive cures 100% after 48 hours.

Care Tips

1. Do not place your Pup Deck in the sun prior to installation; it will shrink and will become unusable.
2. Always store your SUP and surf boards in a shaded area when not in use.
3. Should your Pup Deck get dirty, it can be cleaned using any soap or cleanser and a brush. Be sure to rinse thoroughly, as any leftover residue can make it slippery.
